

## Silver Leaf Willow

*Salix alba 'Sericea'*

Height: 50 feet

Spread: 33 feet

Sunlight: ○

Hardiness Zone: 2

### Description:

A durable and hardy shade tree with shimmering silver foliage all season long, adaptable to all soils, performs well even in standing water, makes an excellent windbreak; tends to drop branchlets, aggressive root system, so do not plant near homes

### Ornamental Features

Silver Leaf Willow has attractive silver deciduous foliage on a tree with a round habit of growth. The glossy narrow leaves are highly ornamental but do not develop any appreciable fall colour. The furrowed brown bark and yellow branches add an interesting dimension to the landscape.

### Landscape Attributes

Silver Leaf Willow is a dense deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance tree that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Invasive

Silver Leaf Willow is recommended for the following landscape applications;

#### **Planting & Growing**

Silver Leaf Willow will grow to be about 50 feet tall at maturity, with a spread of 33 feet. It has a low canopy with a typical clearance of 5 feet from the ground, and should not be planted underneath power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 80 years or more.

This tree should only be grown in full sunlight. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
