

## Mops Mugo Pine

*Pinus mugo 'Mops'*

Height: 3 feet

Spread: 3 feet

Sunlight: ○

Hardiness Zone: 3

Other Names: Mugho Pine, Swiss Mountain Pine

### Description:

A top-notch evergreen garden shrub with an extremely dense, mounded habit of growth throughout its life, very compact and slow growing; very rugged and hardy, excellent for form, texture and color detail in home gardens or for rock gardens; needs full sun

### Ornamental Features

Mops Mugo Pine is a dwarf conifer which is primarily valued in the garden for its ornamental globe-shaped form. It has emerald green evergreen foliage. The needles remain emerald green throughout the winter.

### Landscape Attributes

Mops Mugo Pine is a dense multi-stemmed evergreen shrub with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a high maintenance shrub that will require regular care and upkeep. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Mops Mugo Pine is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Mops Mugo Pine will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
